◯ BJP4 Self-Check 7.4: oddsArray

Language/Type: ☕ Java arrays
Author: Marty Stepp (on 2016/09/08)

Write code that creates an array named odds and stores all odd numbers between -6 and 38 into it using a for loop. Make the array's size exactly large enough to store the numbers.

Type your solution here:

```java
1 int[] odds = new int[22];
2 for (int i = 0, n = -6; n <= 38; n++) {
3     if (n%2 != 0) {
4         odds[i] = n;
5         i++;
6     }
7 }
```

This problem asks for **bare code.** Submit a fragment of Java code as described. Do not write any class or method heading around your code; just write the lines of code that will produce the result described.
