◯ BJP4 Self-Check 1.16: withoutPrintStatements

Language/Type: ☕ Java basics println
Author: Roy McElmurry (on 2016/09/08)

Rewrite the following code as a series of equivalent `System.out.println` statements (i.e., without any `System.out.print` statements):

```
System.out.print("Twas ");
System.out.print("brillig and the ");
System.out.println(" ");
System.out.print("  slithy toves did");
System.out.print(" ");
System.out.println("gyre and");
System.out.println(  "gimble");
System.out.println();
System.out.println(  "in the wabe." );
```

🔃 Revert

Type your solution here:

```
1 System.out.println("Twas brillig and the\n  slithy toves did gyre and");
2 System.out.println("gimble");
3 System.out.println();
4 System.out.println("in the wabe.");
```

This problem asks for **bare code.** Submit a fragment of Java code as described. Do not write any class or method heading around your code; just write the lines of code that will produce the result described.

---

test #1:   output

---

console output:
```
Twas brillig and the
   slithy toves did gyre and
gimble

in the wabe.
```

result: ⊘ pass
