◯ BJP4 Self-Check 8.7: Name

Language/Type: ☕ Java classes fields implementing
Author: Marty Stepp (on 2016/09/08)

Create a class called Name that represents a person's name. The class should have fields named firstName representing the person's first name, lastName representing their last name, and middleInitial representing their middle initial (a single character). Your class should contain only fields for now.

In order for Practice-It to properly test your class, make sure to use exactly the class name and field names described previously. Also make sure to declare your fields using appropriate types.

Type your solution here:

```
1 public class Name {
2     private String firstName;
3     private String lastName;
4     private char middleInitial;
5 }
```

This is a **class problem.** Submit a complete Java class as described.

🚀 **Submit**

▤ 4 Indent
☑ Sound F/X
☑ Highlighting

⊘ You passed 1 of 1 tests.

Go to the next problem: accessorMutator

```
       test #1:  test1

console output:  Name object 1 first : "Martin"
                 Name object 1 last  : "Stepp"
                 Name object 1 middle: 'D'
                 Name object 2 first : "Stuart"
                 Name object 2 last  : "Reges"
                 Name object 2 middle: 'T'
```

result: ⊘ pass
